VOLUME ONE

Keynotes .......................................................................................................................... 1

Coastal Engineering Science to Policy and Practice
Stephen Huntington, Kevin Burgess, and Ian Townend ...................................................... 3

Technical and Economic Optimization of Nourishment Operations
Per Braun ................................................................................................................................... 18

Coastal Waves .................................................................................................................. 29

Long Term Variability of Hurricane Trends and a Monte Carlo Approach to Design
David A. Y. Smith, Philip S. Warner, and Jamel D. Banton .......................................................... 31

Oceanographic Vulnerability to Hurricanes on the Mexican Coast
Rodolfo Silva, Georges Govaere, Paulo Salles, Gustavo Bautista, and Gabriel Diaz ......................... 39

The Influence of Global Climate Change on Extreme Wave Occurrence of the West Coast of the United States
Richard J. Seymour ............................................................................................................. 52

Estimation of Long-Term Variability of Wave Climate around the Coastal Sea Areas of Japan
Yoshio Hatada and Masatake Yamaguchi ................................................................................. 61

An Experimental Study on the Effect of Air-Water Temperature Difference on Growth of Water Waves
Hajime Kato, Hisamichi Nobufuku, and Sho-ichi Nunome ......................................................... 74

Use of Satellite Data and Enhanced Physics to Improve Wave Predictions
Saleh Abdalla, Peter Janssen, and Jean-Raymond Bidlot ............................................................ 87

Effect of Missing Large Wave Data on Estimation Accuracy of Return Wave Heights
Hajime Mase and Toshikazu Kitano ........................................................................................... 97

Estimation of Directional Wave Spectra from HF Radar Sea Echo Doppler Spectra
Shoichiro Kojima, Noriaki Hashimoto, and Yuji Sato .................................................................. 109

Analysis of 12-Year Wave Measurements by the Italian Wave Network
Rodolfo Piscopia, Roberto Inghilesi, Andrea Panizzo, Stefano Corsini, and Leopoldo Franco ................................................................. 121

Development of a National Wave Recording Network for England and Wales
Linda Aueott ............................................................................................................................ 134

Analysis of Wave Groups Using Simulated Annealing
Joaquim M. Garrido, Jose A. Gonzalez-Escribà, and
Numerical Wave Prediction Using Mesoscale Meteorological Model
Nobuhito Mori and Hirakuchi Hiromaru

Statistical Analysis of Directional Sea State Persistence
Fernando J. Mendez, Raul Medina, and Pedro Lomonaco

Wave and Current Modelling Over the Baltic Sea and the Gdarisk Bay
Witold Cieslikiewicz and Agnieszka Herman

Some Simplified Solutions for Confirmation of Storm Tide Codes
Rodney J. Sobey

Storm Surge Model in Wave-Shoaling Region
Takao Yarnashita and Yuki Nakagawa

Wave Heights Distribution in the Surf Zone: Analysis of Experimental Data
Mariano Buccino and Mario Calabrese

Shoaling, Breaking and Broken Wave Characteristics
Yosbimitsu Tajima and Ole Secher Madsen

Wave Height Decay Process Due to Generation of Plunging Vortices
Natsuki Mizutani and Takashi Yasuda

Relation Between Sea Surface Stress and Whitecap Dissipation in the Shoaling Zone
Yasuyuki Baba, Takao Yarnashita, and Shigeru Kato

The Relative Trough Froude Number for Wave Breaking (Laboratory Experiments)
Murat Utku and David R. Basco

Application of Spectral Equilibrium Ranges in the Surf Zone
Jane McKee Smith and Charles L. Vincent

Fully Dispersive Evolution Equations: Wave Breaking and Efficiency
H. Bredmose, P. A. Madsen, H. A. Schärfer, and Y. Agnon

A Numerical Study of Breaking Waves and a Comparison of Breaking Criteria
Tim Pullen and Kaiming She

Near-Bottom Kinematics of Shoaling and Breaking Waves: Experimental Investigation and Numerical Prediction
Michel Benoit, Marilyne Luck, Christophe Chevalier, and Michel Belorgey

A New Wave Breaking Trigger Criteria for Phase-Resolving Numerical Models
David R. Basco and Takashi Okamoto

Quantification of the Wind Effect on Wave Breaking Based on a Boussinesq Wave Model
Qin Chen, James M. Kaihatu, Paul A. Hwang, and Scott L. Douglass

An Experimental Study of Surface Instabilities during Wave Breaking
Muthukumar Narayanaswamy and Robert A. Dalrymple
Reynolds Stresses in Spilling and Plunging Breaking Waves
T. Feng and P. K. Stansby .......................................................... 356

Wave Breaking in a Boussinesq Model with Unstructured Grids
Ole R. Sörensen and Hemming A. Schäffer ........................................ 369

The ONR Test Bed for Coastal and Oceanic Wave Models
Roeland Ris, Leo Holthuijsen, Jane M. Smith, Nico Booij, and Ap van Dongeren ................................................................. 380

Four-Wave Interactions in SWAN
Noriaki Hashimoto, IJ. G. Haagsma, and L. H. Holthuijsen .................. 392

Diffraction in SWAN
L. H. Holthuijsen, A. Herman, N. Booij, and W. Cieslikiewicz ............... 405

Some Applications of the Lake IJssel / Lake Sloten Wave Data Set
Marcel Bottema, Johannes P. de Waal, and Eric J. Regeling ................. 413

Computing Unsteady Wave Refraction and Diffraction in the Nearshore
Andrew B. Kennedy, James T. lürby, and Fengyan Shi ......................... 426

Internal Kinematics Obtained from Numerical Wave Model Results
Hemming A. Schäffer ......................................................................... 439

Improved Coastal Wave Modelling Using Coupled Spectral Wave Transformation and Wave Disturbance Models
Nigel P. Tozer and Noemie Diirand .................................................. 448

Improved Modelling of Nonlinear Four-Wave Interactions in Shallow Water
Gerbrant Ph. van Vledder and Marcel Bottema .................................. 459

Velocity Formulations and Mild-Slope Approximations in the Framework of Boussinesq Theory
Per A. Madsen, Harry B. Bingham, and Benlong Wang ....................... 472

The Use of Numerical Modeling in the Planning of Physical Model Tests in a Multidirectional Wave Basin
Enric Carci, Francisco J. Rivero, Hans F. Burcharth, and Enrique Macineira ................................................................. 485

Boussinesq-Type Modeling of Measured Wave Breaking on a Circular Shoal
Jacco Groeneweg, Neelke Doorn, Matt Borsboom, and Marcel van Gent 495

A Fast Numerical Scheme for Unsaturated Random Breaking Waves in 3-D Bathymetry
Yoshimi Goda ............................................................................. 508

A Laboratory Experiment on Velocity Field Near Bottom Due to Obliquely Descending Eddies
Akio Okayasu, Hiroyuki Katayama, Hitoshi Tsuruga, and Hidemitsu Iwasawa ................................................................. 521

Wave Boundary Layer Instability Near Flow Reversal
Rafik Absi .................................................................................. 532

Bottom Friction in Nonlinear Random Waves Plus Current Flow
Dag Myrhaug and Lars Erik Holmedal ................................................................. 545

On Wave Induced Undertow at a Barred Beach
Giuseppe R. Tomasicchio and Francisco Sancho ..................................................... 557

Field Observation of Wave Evolution on a Double Barred Beach
Nadia Senechal, Philippe Bonneton, and Helene Dupuis ........................................... 570

Estimation of Occurrence Properties of Large Wave Height in a Storm
Takao Ota, Yoshinori Hagi, and Akira Kimura ......................................................... 580

Probabilistic Modelling of the Surf Zone Dynamics
Mª Carmen Castillo and M. A. Losada ....................................................................... 592

Nonlinearity in Successive Wave Crest Height Statistics in Finite Water Depth
Hanne Therese Wist, Dag Myrhaug, and Håvard Rue .................................................. 601

Probability Distribution of Extreme Wave Heights in Finite Water Depth
Kyunmo Ahn ................................................................................................................ 614

Numerical Simulation of Wind-Wave Interaction in the Turbulent Boundary Layer
Hidemi Mutsuda ......................................................................................................... 625

A Stratified Sampling Technique in the Extreme Value Analysis and its Applicability
Masataka Yamaguchi and Yoshio Hatada .................................................................... 638

Spatial and Temporal Variability of Wave Attenuation over a UK Saltmarsh
Iris Möller, Tom Spencer, and Jane Rawson .............................................................. 651

Validation of Mathematical Modeling of Wave Overtopping on Dykes
Hanz D. Niemeyer, Dirk Schulz, Ralf Kaiser, Janine Möller, Holger Schüttrumpf,
Tim Pullen, and Marcel van Gent .............................................................................. 664

An Investigation on a Time Dependent Nonlinear Equation for Wave Propagation over Gently Varying Depths Using the Finite Element Method
Conceígão J. E. M. Fortes, J. Leonel M. Fernandes, and Maria Angela Vaz dos Santos ...... 676

Numerical Modeling of Ship-Induced Wave Propagation
Neelke Doorn, Jacco Groeneweg, Otto Weiler, and Mart Borsboom ................................ 689

Nearshore Currents, Swash, and Long Waves ......................................................... 703

Wave Breaking and Rip Current Circulation
Merrick C. Haller and H. Tuba Özkan-Haller .............................................................. 705

Rip Currents in Semielliptic Bays
Asunciòn Baquerizo, Miguel A. Losada, and Jose L. Ortega ...................................... 718

RIPEX: Rip-Current Pulsation Modeling
Ad Reniers, Jamie MacMahan, Ed Thornton, and Tim Stanton ...................................... 727

RIPEX - Rip Current Pulsation Measurements
Jamie MacMahan, Ad J. H. M. Reniers, Ed B. Thornton, Tim Stanton, and Robert G. Dean ................................................................. 736

Incorporation of Random Wave Effects into a Quasi-3D
Nearshore Circulation Model
James M. Kaihatu, Fengyan Shi, James T. Kirby, and Ib A. Svendsen ................................................................. 747

Godunov-Type Model of Wave-Induced Nearshore Currents at a Multi-Cusped Beach in the UKCRF
Benedict D. Rogers, Alistair G. L. Borthwick, and Paul H. Taylor ............................................................................ 760

Structure-Generated Macrovortices and Their Evolution in Very Shallow Depths
Maurizio Brocchini, Alessandro Mancinelli, Luciano Soldini, and Roberto Bernetti ......................................................... 772

Modeling of a Rip Current System on Moreton Island, Australia
Kevin A. Haas, Ib A. Svendsen, Robert W. Brander, and Peter Nielsen ............................................................................ 784

Morphodynamics at the Updrift Side of Inlets
E. P. L. Elias, M. J. F. Stive, and J. G. Bonekamp .................................................................................................................. 797

Curvilinear Modeling of Nearshore Circulation at Grays Harbor
Fengyan Shi, Ib A. Svendsen, James T. Kirby, Jane McKee Smith, and Mary A. Cialone .......................................................... 810

Sediment Intrusion into Gamo Lagoon by Wave Overtopping
Hitoshi Tanaka, Suntoyo, and Tsuyoshi Nagasawa .............................................................................................................. 823

3-D Nearshore Current Model Focusing on the Effect of Sloping Bottom on Radiation Stresses
Hisamichi Nobuoka and Nobuo Mimura .......................................................................................................................... 836

Simulating Non-Hydrostatic Free Surface Flows
Shubhra K. Misra, James T. Kirby, and Ib A. Svendsen ........................................................................................................ 849

Three-Dimensional Lateral Mixing in Shear Waves
Qun Zhao, Ib A. Svendsen, and Kevin A. Haas .................................................................................................................. 859

Another Approach to Longshore Current Evaluation
Cesar Mösso, Agustin Sánchez-Arcilla, Ole S. Madsen, Joan Pau Sierra, and Ivan Cáceres ........................................................................... 872

The Influence of Refraction and Shoaling on Wave Run-up under Oblique Waves
Nino Ohle, Janine Möller, Holger Schütttrumpf, Karl-Friedrich Daemrich, Hocine Oumeraci, and Claus Zimmermann ........................................................................................................ 885

On Swash Zone Boundary Conditions for Wave-Averaged Models
Giorgio Bellotti and Maurizio Brocchini .......................................................................................................................... 895

The Simulation of Swash Oscillations by a Breaking Waves Model
Nguyen The Duy, Tomoya Shibayama, and Akio Okayasu ............................................................................................... 904

An Integrative Approach to Investigating the Role of Swash in Shoreline Change
Tony Butt, Darren Evans, Paul Russell, Gerhard Masselink, John Miles, and Peter Ganderton ................................................................................. 917

The Overtopping of a Plane Slope by Multiple Swash Events
Steven M. Williams and D. Howell Peregrine .................................................................................................................. 929
Wave Runup Modeling Using Velocity Potential Based on Nonlinear Mile-Slope Equations
Taro Arikawa and Masahiko Isobe ................................................................. 942

Observation of Waves in the Surf and Swash Zones Using Particle Image Velocimetry
Mohammad Dibajnia ....................................................................................... 955

Numerical Modeling of Swash Zone Hydrodynamics
Jack A. Puleo, K. Todd Holland, Don N. Slinn, Ernie Smith, and Bret M. Webb ................................................................................................. 968

Swash Zone Morphodynamics and Uprush/Backwash Asymmetry
Matthew Foote and Diane Hörn ..................................................................... 980

Sediment Transport in Wave Uprush and Downrush on Swash Zone
Yukiko Tega and Nobuhisa Kobayashi .......................................................... 993

Swash Zone and Near-Shore Watertable Dynamics
Nick Cartwright, Peter Nielsen, and Oluf Zeilund Jessen ................................ 1006

Hydraulic Gradients and Bed Level Changes in the Swash Zone on Sand and Gravel Beaches
P. Holmes, D. Hom, J. Blewett, B. Blanco, T. Peel-Yates, and A. Shanehsaz-zadeh .......................................................... 1016

Applications of a Numerical Model for Swash Zone Flows on Gravel Beaches
Suzie Clarke and Jesper Damgaard ................................................................ 1028

Spring-Neap Tidal Water Table Fluctuations in a Coastal Aquifer: Beach Slope - Seepage Face Effects
Ling Li, Andy Baird, and Diane Hörn ................................................................ 1037

Large-Scale Turbulence Structures Over an Immobile Gravel-Bed inside the Surf Zone
Javier L. Lara, Inigo J. Losada, and Edwin A. Cowen ..................................... 1050

Cross-Shore Long-Wave Propagation at Ria Formosa (Portugal)
João Alfredo Santos, Eric Didier, Maria de Graga Neves, Oscar Ferreira, Luis Gil, and AnaMatias ............................................................... 1062

Examining the Low Frequency Predictions of a Boussinesq Wave Model
James T. Kirby and Qin Chen ......................................................................... 1075

Recent Developments in the Derivation of Long Period Wave Criteria
Gus Jeans and Jan de Waal ............................................................................. 1088

Generation of Long Waves by Short Wave Groups
Ap van Dongeren, Henk Jan Bakkenes, and Tim Janssen .............................. 1093

Generation of Seiches by Cold Fronts
Martijn P. C. de Jong, LeoH. Holthuijsen, and Jurjen A. Battjes ................. 1106

Generation of Low Frequency Waves on a Step Configuration
AkiraKimura, Yoshiharu Matsumi, and Kenichi Ohno .................................. 1118

Surf Beat Kinematics Induced by Random Waves

On the Spatial Versions of the Zakharov and Dysthe Models
Simulation of Tsunami-Induced Flood in Hinterland of Seawall by Using Particle Method

Hitoshi Gotoh, Minoru Hayashi, and Tetsuo Sakai .......................................................... 1155

Numerical Analysis on Tsunami Run-Up and Tsunami Flood to a Coastal City

Xiaodong Liu, Shigeki Sakai, Tsutomu Mikami, Shunji Iwama, Fumihiko Imamura, Nobuo Shuto, and Hikaru Kikuchi ................................................................. 1168

A Numerical Modeling of Generation and Propagation of Water Wave Generated by Landslide

Takaaki Shigematsu, Masayoshi Hirose, and Kazuki Oda .......................................................... 1178

The Tsunami Wave Force Acting on Land Structures

Ryosuke Asakura, Koji Iwase, Tsuyoshi Ikeya, Makoto Takan, Toshimichi Kaneto, Naoki Fuji, and Masanori Ohmori.......................................................... 1191

Effect of the Distortion of Typhoon Pressure Distribution on Storm Surge Estimation

Albena Veltcheva and Hiroyasu Kawai ............................................................................. 1203

Simultaneity of Maximum Storm Surge and Wave Caused by Typhoon in Tokyo Bay, Japan

Hiroyasu Kawai and Shinji Takeura ............................................................................. 1216

Vertical Circulation in a Well-Mixed Estuary

Willem T. Bakker ........................................................................................................... 1229

Forecasting Oil Pollution in Harbour Engineering

Eric Comerma Pifia, Manuel Espino, Agustin Sanchez-Arcilla, and Manuel Gonzalez.......................................................... 1242

Multi-Variate Statistics of Hydraulic Boundary Conditions for the Rotterdam Harbour Extension

P. B. Webbers, H. G. Voortman, P. H. A. J. M. van Gelder, and J. K. Vrijling .......................................................... 1254

Water Renovation in Harbour Domains. The Role of Wave and Wind Conditions

Agustin Sanchez-Arcilla, Ivan Caceres, Daniel Gonzalez, Joan Pau Sierra, and Rafael Escutia .......................................................... 1267

Coupling of Wave and Circulation Numerical Models at Grays Harbor Entrance, Washington, USA

Mary A. Cialone, Adele Militello, Mitchell E. Brown, and Nicholas C. Kraus .......................................................... 1279

Predicting Water Levels Using Artificial Neural Networks

Marco R. Westra, Gerbrant Ph. van Vledder, Gijs K. F. M. van Banning, and David P. Hurdle .......................................................... 1292

Harbour Excitation Due to a Coast-Parallel Current

Ashwini K. Otta ............................................................................................................. 1303

Coastal Structures ............................................................................................................. 1315

Stability of Blockwork Breakwaters and Seawalls

Adam Beuzijen, William Allsop, and Tom Bruce ................................................................ 1317

The Influence of Entrained Air on Violent Wave Impact
Rock Slope Stability with Shallow Foreshores
Greg Smith, Ida Wallast, and Marcel R. A. van Gent

Influence of the Density of Placement on the Stability of Armour Layers on Breakwaters
Alwin VandenBosch, Kees d'Angremond, Henk Jan Verhagen, and Jelle Olihof

Positioning of Cubes on a Breakwater Slope
Henk Jan Verhagen, Kees d'Angremond, and Kees vander Vliet

A 15-Year Monitoring History of Dolosse at Crescent City
Lisa A. Romanoski, Jeffrey A. Melby, and Thomas R. Kendal

The CORE-LOC Armoring Technique Experience on Recent Projects
David J. Werren, William F. Baird, Michel Denechere, and Michel Föns

Model Testing and Reliability Evaluation of the New Deepwater Breakwater at La Coruna, Spain
Hans F. Burcharth, Enrique Macineira, and Pedro Canalejo

A New Procedure for the Scaling of Core Material in Rubble Mound Breakwaters Model Tests
Francisco Martin, Cynthia Martnez, Pedro Lomónaco, and Cesar Vidal

Experimental Study and Numerical Modeling of Wave Induced Pore Pressure Attenuation inside a Rubble Mound Breakwater
Peter Troch, Julien De Rouck, and Hans F. Burcharth

An Advanced Design Method for Armor Units Covering a Rubble Mound Foundation of a Composite Breakwater Based on a Wave Induced Flow Field
Akira Matsumoto and Shigeo Takahashi

Wave Setup Induced Damage to the Nafanua Harbour Breakwaters, 'Eua, Kingdom of Tonga
Danny 'Amanaki, John Imrie, Gildas Colleter, Melissa Foster, and Peter Cummings

Applications of Digital Image Technology to Port Operations and Coastal Monitoring
David Phelp, Jacques van Aswegen, Hans Moes, and Gavin Hough

Combination of Potential & Viscous Flow Models for Wave Interaction With a Submerged Square Body
Pierre Ferrant, Lionel Gentaz, and David Le Touze

3-D Eddy Structure Around the Breakwater Head with Wave Overtopping
Masaya Kato, Yasunori Watanabe, and Hiroshi Saeki

Velocity Moments around Detached Breakwaters
Suzanalic and Andrew J. Chadwick

Exposed Jetties: Inconsistencies and Gaps in Design Methods for Wave-Induced Forces
Matteo Tirindelli, Giovanni Cuomo, William Allsop, and Kirsty McConnell

Time Domain Decomposition of Indent and Reflected Waves
